SUMMARY

As a software engineer, I build products that impact millions of users worldwide. My passion lies in learning and exploring new technologies, deepening my understanding of product and system design, and contributing to both personal and organizational growth through innovative ideas that create a positive impact on the world.

TECHNICAL SKILLS

Programming Languages: Kotlin, Java, C, Python
Android Development: Android SDK, Jetpack (LiveData, ViewModel, Navigation), Coroutines, Dependency Injection (Koin/Hilt), Room, Data Binding
Backend & APIs: Node.js, Express.js, REST APIs, MongoDB, JWT Authentication
Design Patterns: Singleton, Factory, Observer, Builder
Tools & Version Control: Git, Android Studio, Gradle

PROFESSIONAL EXPERIENCE

Motorola Mobility

Aug 2022 – Present

Software Engineer

- Led platform security, Android OS upgrades, and carrier customization across 10+ carriers, launching **VT**, **RTT**, **EC**, and **WFC** with **100%** compliance; enabled secure, advanced calling for **50M+** users globally.
- Developed AI-powered “Sketch to Image” feature for Moto Notes, collaborating with 3 teams (China, Brazil, US); adopted in stylus device models, boosting user engagement by **35%**.
- Engineered **palm rejection** and multi-input logic in AOSP Canvas using stylus/finger differentiation algorithms; improved stylus UX accuracy by **90%**, contributing to **5M+** stylus-enabled devices shipped.
- Enabled calling support on the **Razr 40+** external display, delivering seamless functionality for foldable devices.
- Reduced Verizon video call setup latency by **75%** (2,455ms to 738ms), significantly improving performance.
- Standardized Verified Business Call UI across 3 major US carriers (**T-Mobile**, **AT&T**, **Verizon**), resolving inconsistencies on **30+** UI screens; reduced carrier feedback loop time by **40%**.
- Contributed **10+** carrier features and key stability fixes to AOSP Telecom via upstream patches, enhancing call experience across production devices.
- Extended Native NVVM framework with secure backup, flexible restoration, and enhanced UI; adopted by **100M+** devices globally, decreasing data loss incidents by **25%**.
- Upgraded Moto Secure with 3 advanced security modules: **Phishing Detection**, **Firmware Shield**, and **Secure Lock**; rolled out to 15+ models, increasing device protection coverage by **80%**.
- Enabled DSDS (**Dual SIM Dual Standby**) support for VT and WFC, improving reliability across 4 global markets; impacted **30%+** of dual-SIM user base in NA, EMEA, and AP regions.

PROJECTS

Development of Backend Application

Aug 24 – Nov 24

- Developed the backend for a web platform using **MongoDB**, **Node.js**, and **Express**, with all functionality exposed via **RESTful APIs**.
- Implemented secure **JWT authentication**, optimized **MongoDB pipelines**, and integrated **Google Drive API** for file uploads. Deployed on **AWS** with focus on **scalability** and **high availability**.

Comparative Analysis of Methods for Identifying Near-Duplicate Web Documents

- Conducted in-depth research on near-duplicate detection, analyzing the 2014 paper “**A Near-Duplicate Detection Algorithm to Facilitate Document-Clustering**” and the 2009 paper “**A Novel and Efficient Approach for Near Duplicate Page Detection in Web Crawling**.”
- Achieved **NC2** comparison accuracies: **99.64%** (stemmed), **99.97%** (lemmatized).
- Achieved **N** comparison accuracies: **84.15%** (stemmed), **86.19%** (lemmatized).

KEY ACHIEVEMENTS

- Recognized by Motorola for driving product adoption through agility and innovation.
- Secured 2nd prize in Motorola’s hackathon for the “Care for Dependent” solution.
- Supported Motorola’s achievement of Android Enterprise Gold Partner certification through project contributions and certifications.

EDUCATION

CMR College of Engineering & Technology, Telangana, India
B.Tech. in Computer Science and Engineering (2018–2022)

CGPA: 8.86 / 10.0
